cellular carbohydrate catabolic process estrogen metabolic process carbohydrate catabolic process

response to drug carbohydrate metabolic process lipid metabolic process response to xenobiotic stimulus proteolysis

hemoglobin metabolic process digestion

response to stimulus

multicellular organismal process **DNA** integration

metabolic process

biological regulation

transposition, DNA reconstruction process

peptide catabolic process

developmental process

RNA-dependent DNA biosynthetic process

aging

positive regulation of cell division

positive regulation of immune system process

response to cadmium ion

positive regulation of microglial cell activation

regulation of blood pressure

carboxylic acid metabolic process

methyl-branched fatty acid metabolic process

fatty acid metabolic process

fatty acid alpha-oxidation

long-chain fatty acid biosynthetic process very long-chain fatty acid metabolic process

fatty acid beta-oxidation
